DRAFT – NOT TO BE ENTERED ON THE RECORD

Proposed Response to Final Office Action
for
Application no. 09/576,116, filed on May 22, 2000
of Lennig et al.

In response to the Final Office Action mailed on May 5, 2004, please reconsider the present application in view of the following remarks.

Applicant respectfully submits that the statements made in the Examiner's "Response to Arguments" in the Final Office Action (pages 8-9) are clearly wrong. The Examiner has misinterpreted the Lee reference. Applicant maintains the arguments raised in the Amendment filed on February 20, 2004 (pages 12-16), and those arguments are incorporated herein by reference.

Independent Claims 8, 31 and 39

In paragraph 9 (page 8) of the Final Office Action, the Examiner refers to Applicant's argument that Lee only discloses using statistical (probable) minimum and maximum durations of a typical syllable, not using the duration of the final syllable of an utterance for endpoint detection (Amendment filed Feb. 20, 2004, p. 13, last paragraph). Specifically, the Examiner's response is:

The examiner disagrees with the applicant's assertion because Lee teaches to detect the endpoint of an utterance based on several factors, including duration of each syllable in the utterance, where final syllable also includes in the start to end of the whole utterance of speech (see col. 10, lines 24-28).
